

# Segmentation & Activation

## Superpowered Segmentation with No Code

Create, visualize and test audiences quickly and easily without writing a line of code so that marketers can focus on agile, creative marketing—ultimately leading to high ROI and low TCO.

Your CDP's segmentation capabilities need to be as dynamic as your customers—and that means powering personalized experiences at the cadence of the customer without getting bogged down in SQL.

Using the full breadth and depth of data and aggregates, Redpoint's dynamic, easy-to-use, AI-fuelled segmentation enables 1:1 personalization at scale.

### Who Needs Data Scientists?

Bring more and better campaigns to life faster by building dynamic segments without code. GenAI features include a natural language UI that helps you easily access and query your data, with transparent, easy to understand results.

### Tap Into the Full Depth of Data

Access any behavioural, transactional, demographic or calculated data you want—including propensity, churn or predictive models (yours, or Redpoint's)—to meet any business or CX use case with full confidence that all attributes have been cleansed and perfected.

### Support Dynamic Journeys

Drive high customer value by creating dynamic segments that can be activated in real time across the customer journey, supporting use cases for acquisition, retention, cross-sell and upsell and even the reactivation of lapsed customers.

Measured Results from Redpoint Customers:

4X

Granularity of segments  
without additional resources

80%

Reduction in time to build  
new segments

20%

revenue growth and  
reduction in cost

## Key Capabilities

### Dynamic Segments

Create dynamic, real-time segments quickly through an intuitive, easy-to-use, no-code interface. Use any and all CDP data for flexible segment design and drive multi-channel messaging from a single interface. Segmentation includes multiple levels—individuals, households or business entities—combined with inline suppressions and automatic opting in/out of segments.

### BYOM for Intelligent Messaging

Base segments on propensity, product recommendations and next-best action for effective customer engagement and maximum ROI, using your models (BYOM) or ours. Generate segment-level insights with dashboards, visualization tools and aggregate calculations to profile potential audiences, size engagement opportunities, and explore what-if scenarios.

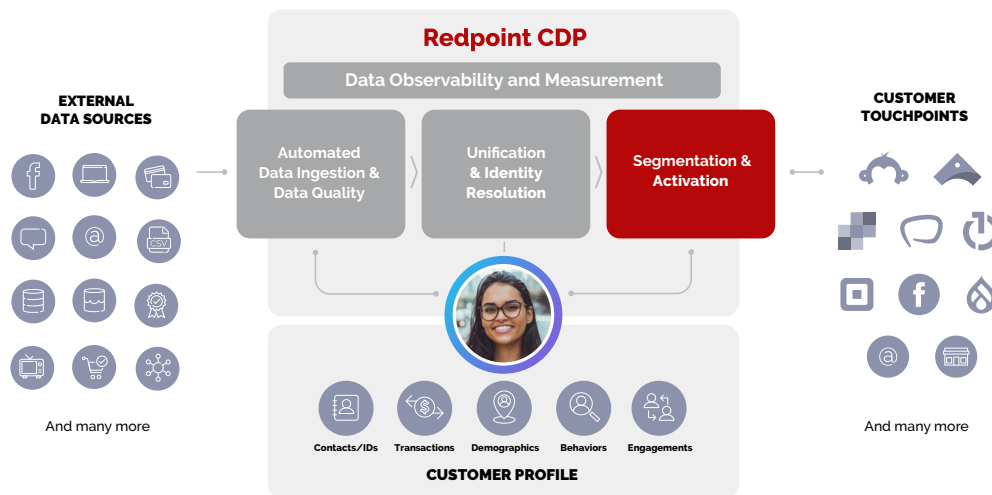

### Advanced GenAI

Redpoint's GenAI audience builder and natural language UI make it easy to build segments, refine them through an ongoing conversation and easily understand the results. No SQL or "black box" allowed!

### Channel Activation & Operational Efficiency

Schedule and automate segment creation and activation as needed (easily setting and adjusting run times, dates and intervals). Redpoint's out-of-the-box connectors support connectivity to your preferred activation platform with marketing-ready data and closed-loop response tracking.

**“With Redpoint's segmentation capabilities, our communications are timely, relevant and extremely personal—and we scale that one-to-one marketing and deep personalization to every customer and prospect.”**
